

MBTI	ISFJ
Belbin	completer, specialist

Strengths <u>Critical thinking</u>: “reflective nature” (from feedback), strength in allowing different experiences/judgements/facts to come to a balanced opinion (from personal and work experience, MBTI: S) <u>Group work</u>: preparation, subject knowledge, attention to detail (from personal and work experience, feedback, MBTI: J, Belbin) <u>Presenting skills</u>: soft voice, authentic presence (from feedback), ability to build a comprehensive story and engage audience (from feedback, MBTI: F) <u>Interpersonal skills</u>: loyal – engaged – conscientious, delivering (or wanting to deliver) high quality work, organized (from experience, feedback, MBTI)	Weaknesses <u>Critical thinking</u>: not decisive, second guessing (from personal and work experience, MBTI: S<->F), tendency to use internal > external sources (from feedback, MBTI: I) <u>Group work</u>: difficulty in delegating work load, stuck on details instead of seeing bigger picture (from feedback, MBTI: S<->J, Belbin) <u>Presenting skills</u>: work on clarity and breathing (from feedback) <u>Interpersonal skills</u>: perfectionism results in low efficiency, results take too long (from experience, feedback, challenges Belbin)
Opportunities MBTI’s strong “F”: tendency to be rather reserved in interaction, but strong wish to build satisfying (work and personal) relationships	Threats MBTI’s strong “J” (and S): tendency to want to structure and organize environment, and thus miss opportunities and fail (from experience)

Log the Event - the facts about what happened and why.

For one of our modules (IPOM), there was an assignment to prepare an individual presentation of a market segment. The presentation was not marked, but could provide feedback for the final formative assignment for the module. I had prepared my presentation in a powerpoint. There would be 2 hours in which (some, not all) students could deliver their presentations, 1 hour during the lecture and 1 hour during the subsequent seminar in small groups.

There were considerably less students attending the lecture than usual. Students were chosen at random to present during the lecture, and I felt happy not to have to go up as one of the first. By the end of the hour, the module leader invited students to volunteer their presentation. A number of students volunteered (maybe 4?), I waited.

Then in the seminar, again I did not take my chance to do the presentation, because I realized I was the only one with a powerpoint prepared and felt I would stand out. Afterwards, I read in the brief (one of 3 versions available online, and obviously a different one than I had used preparing for the presentation) that "students should not use powerpoint for their presentation as it would take too long".

Record your Reaction - note down how you felt, how you thought, how others felt and behaved.

During the 2 hours (lecture + seminar) of presentations, I initially felt nervous about presenting my prepared work. The fact that it was in the lecture hall and in front of lots of students, was not new to me (I am a lecturer, and thus quite used to addressing large groups of students), but I was not at ease as I didn't feel confident in the subject. After listening to a few presentations, I thought mine would be "okay". I relaxed a bit, but I did not get chosen.

When the module leader invited students to volunteer, a few students took their chance. They were well prepared, confident. I listened with interest and made excuses for not volunteering next. One major issue was that I seemed to be the only one with a powerpoint prepared. I felt that by going up I would stand out, that other students would think I "overdid it/tried too hard/...". I told myself I would have a chance to get feedback in the seminar, and not be looked at as someone who is trying to profile herself.

The seminar group was smaller, about 20 students, and there was ample opportunity to present. I really did want to hear feedback on my preparation, as I would be building on that for my formative assignment. I felt silly for preparing a powerpoint, but at the same time felt I needed that powerpoint to talk about my subject. I got frustrated with myself. I felt fellow students and definitely the tutor would think of me as "one of the students that didn't prepare". And I had prepared, thoroughly!

Coming home after this experience, I was very critical for myself. I couldn't believe the chance I had missed. No one would ever know what I had prepared, and I had no feedback on whether or not I was going in the right direction. I thought I blew it!

Think about what you have learned. What might have influenced the event – previous experience, external factors, the situation?

I chose this situation as a critical incident, because I have learned and continue to learn from it.

On the one hand, this incident signals a problem that has not happened to me in a long time. I know that I have to make a conscious effort to step forward and voice my opinion (I recognize challenges as an MBTI “I”) and over the years, in my job, I have grown confident in doing that. I am part of teams of (and get validation from) colleagues where I take on the role of “specialist” (Belbin). But ...

The context of this study program, and this situation in particular, challenges that because the subject (“business” in general) is new to me and even the nature (or preferences, cf MBTI) of the people around me here is different. In social work, I recognize a lot of colleagues and indeed students with I and F preferences, as opposed to more E and T preferences with people I meet here. I have learned that I respond to these group dynamics, even at the level of an individual assignment. My “not feeling at ease” enforces natural preferences to take a step back (MBTI “I”) and to need structure (MBTI “J”). I have learned that professionally – mostly without realizing it – I worked my way to a position very much within my comfort zone. But given my aspirations (in this situation: to get feedback, more generally: take active part in the conversation on a management level), I became more aware that I have to overcome these tendencies and work on stepping forward and voicing my (unfinished) ideas to 1/ benefit from feedback and 2/ connect and actually be part of the conversation (important for me as an MBTI “F”).

Because on the other hand, this experience does bring out issues that are very characteristic. I tend to invest a lot of time and effort in preparation and take on projects that have a clear goal. In teams, I easily take on the role of completer and specialist (cf. Belbin). I learned that I have strong tendencies to conform to the norm ... to a point where it hurts my chances to contribute professionally at a standard that I hope to achieve. I have gotten feedback before about efficiency relating to my waiting to come forward with preparation, until I feel it is good enough. I understand the crucial importance here, as conclusions not only have to be qualitative, but also *shared* (which is a result of the process of getting to decisions). I have learned how difficulties I have experienced in the past, stem from seemingly innocent behavior following my I and J (cf. MBTI) tendencies. And I value shared meaning (MBTI “F”)!

What changes you are going to make? Pull out your learning experiences - what would you do differently next time, how have your values changed.

This experience, and thinking about it with the input from DSBL, has taught me to be more perceptive/conscious in recognizing my insecurities and where they come from and act on it. The very next chance I got, I volunteered for a leading role in a role play from a different module. My first instinct was to step back, and when I recognized that, I pushed through the discomfort and volunteered. It turned out to be a very relevant learning experience and a chance to build relations with fellow students.

Building on that, I want to make a conscious effort to re-categorize remarks and recommendations from “failure” (my perfectionist views, MBTI “J” and comfortable but detached “specialist” role in Belbin) as “constructive feedback” and opportunity to grow beyond my known frameworks (MBTI “I”). I – atypically! – asked people in my close circle to help me with this intention and challenge me.

Most of all, I will take every opportunity to tackle assignments not from an individual (comfort) position, but by branching out: engage with others, look for challenging new frameworks, ask feedback, ... If I had done that here, I would have known about the “no powerpoint”-addition to the brief. I have learned that it may be easy to organize work load, but also lonely and less rich to work “from an island”.

Goal: What do I want/need to be able to learn / do?	How will I achieve this? What will I do?	What resources or support will I need?	What will my success criteria be?	Target dates for review and completion
Group work and networking skills in general: focus on process and shared meaning	Adopting a different (leadership) style to meetings: more facilitative, less directive. e.g. "curriculum change at work": plan 3 meetings with the team 1/ positions? 2/ come to proposals 3/ make decision	Colleagues: open to this + able to invest the time	Personal level: feedback from colleagues (feeling engaged in process) Outcome level: *does curriculum change meet standard *do colleagues feel engaged in final decision	February 20xx
Learn to prioritize: invest most in what is most important, confidently delegate rest (fighting perfectionism and taking over)	First thought: who can I do this with? Add time allowance to schedule and stick to that (what needs to be done in given time?)	*self-evaluation: keep journal *ask mentor to follow up	Personal level: feedback from team (balance?) Outcome level: satisfied with the big picture	December 20xx May + September 20xx
Define career options: discovering & presenting myself in other markets	Explore: job sites, employer market Pro-active: prepare CV and ask feedback	Career information and coaching/feedback from career center	List of possible alternative sectors for my strengths (with challenges)	May 20xx July 20xx

P58876; Personal Development & Leadership: Assessment Task 1: Action Plan (20%)

Student number: 1xxxxxxx

Criterion	70-100	60-69	50-59	Refer/fail
Self-evaluation (SWOT) 20%	Is confident in addressing strengths and weaknesses and can reflect on feedback from others	Able to evaluate strengths and weaknesses; can acknowledge feedback from others and can express these ideas effectively	Begins to recognise strengths and weaknesses Articulates the ideas with lapses but with limited clarity & insight	Is unable to meaningfully undertake the process of self-criticism Confusing analysis and discussion
Reflection 40%	A comprehensive, reflective and analytical review which shows clear understanding and critical evaluation of strengths and weaknesses in relation to current situation presented in the form of a series arguments Effective evaluation of experience of tasks (including group work) undertaken in module and, where appropriate, across the programme is used as basis for reflection and development	A good reflective appraisal including a variety of factors and some analysis which shows some understanding of self appraisal of strengths and weaknesses in relation to current situation Offers evaluation of experience of tasks (including group work) undertaken in module and, where appropriate, across the programme	A largely descriptive review of current situation which includes some reflection on self appraisal of skills Limited reflection on tasks undertaken (including group work) undertaken in module and across the programme	A descriptive and superficial review of experience of tasks (including group work) undertaken in module and across the programme Little or no evidence of an ability to reflect effectively on tasks undertaken (including group work)
Action planning 40%	Identifies broad areas for future development and illustrates strategies for effectively achieving these goals. Good ability to set quantifiable and realistic objectives (SMART) Action clearly follow from reflection	Considers areas for future development and how this can be achieved. Sound ability to set quantifiable and realistic objectives(SMART) Begins to develop action plans based on feedback and reflection	Some thought given to future skills development. Basic ability to set quantifiable and realistic objectives (SMART) Is able to identify plans for action but links between evaluation and plans not clear	Very limited ability to identify appropriate personal and professional objectives Very limited ability to set quantifiable and realistic objectives(SMART) Links between evaluation and plans not clear

DEVELOPMENTAL FEEDBACK

Strengths:

- The key requirements of the submission were met & the three areas of groupworking, critical thinking & presentation skills were considered along with other areas.
- You demonstrate a very insightful level of self-awareness and reflective capability. You drew evidence from MBTI, Belbin and other sources to underpin your self-analysis. You were able to explore your profile in-depth and to understand why some scenario's may be challenging for you. This was very effectively explored within the Viva in a grounded and practical way.
- The Critical incident demonstrated an ability to self-observe and analyse your own behaviour in external environments and group dynamics. This was perceptively explored as well as your own emotional, psychological and social responses along with preference for structured processes/ high levels of preparation/ conforming to the norm. You demonstrated a high level of reflexivity within the Viva
- You developed an Action Plan which incorporated a range of goals – there was a good alignment between your self-evaluation & career and personal goals. You were able to talk thoughtfully & insightfully around your Plan including proposal to adopt different leadership styles within meetings.

Improvements for further assessments:

- You may also want to continue to develop the mini-actions within the Plan to ensure this continues to work for you.
- Do continue to read and deepen your reflexive capability - you already demonstrate a thoughtful, engaging and enquiring reflective style. Do ensure this keeps balanced and to try and objectify some of your perceptions and lived experience.
